

Head and Neck Cancer Awareness Week

April 8–15

Ten minutes could save your life.

Approximately 75 percent of head and neck cancers begin in the oral cavity, which led to tobacco and alcohol users being most at risk in the past.

But, today, that isn't the case.

Oral, head and neck cancers now affect a broader group of people and increasingly at younger ages. At Baptist MD Anderson Cancer Center, our physicians believe everyone should be screened. That means you, too.

Because this is so important, we are hosting two head and neck cancer screenings during Head and Neck Cancer Awareness Week, April 8-15 — one at Baptist MD Anderson and one at Baptist Medical Center South. The best part is they're free!

While we always want to prevent cancer, screening helps to diagnosis the cancer early, when it is at its most treatable. A thorough non-invasive oral, head and neck cancer screening takes less than 10 minutes and can offer you peace of mind. Please sign up for one of our screenings using Eventbrite. We have four available block times to choose from. Walk-ins are always welcome.
