

## Wolfson Children's Hospital

### Strategic Issue: Community Health Needs Assessment and Implementation Plans 2016 - 2018

**Issue:** Report of Years 1 and 2 results of Community Health Needs Assessment Implementation Plan

#### **Background:**

The Affordable Care Act requires that nonprofit hospitals conduct a community health needs assessment and develop implementation plans to address the needs prioritized every three years. The most recent needs assessment was conducted in 2015. The ACA requires that the boards of nonprofit hospitals approve the assessment and implementation plans.

A work group of Wolfson clinicians and administrators reviewed the needs identified in the assessment and prioritized: **Access to Care, Cancer, Health Disparities and Mental Health**. Implementation plans for Wolfson Children's Hospital were developed in consultation with community organizations to address the prioritized health needs and approved by the Wolfson Children's Hospital Board January 28, 2016.

#### **2016-2018 Prioritized Needs and Implementation Plans:**

**Access to Care:** Increase enrollment in Florida KidCare through community outreach. Work with local school boards to establish primary care services sites. Reduce preventable hospitalizations from asthma by building on the Community Asthma Partnership program. Support the work of the Bower Lyman Center for Medically Complex Children and the UF Center for Medical Weight Loss. Offer health related programming in the community. Participate in local community health fairs. Provide free "back to school" physicals. Support and advocate for legislation focused on improving access to care.

**Health Disparities:** Provide enrollment assistance for Florida KidCare. Hire bilingual staff to better communicate and understand the cultural barriers to care for the Hispanic population. Provide education and health screenings in low-income communities. Build the efforts of the Community Asthma Partnership. Participate in local community health fairs to provide screenings and education. Offer school based programming aimed at improving child health. Provide education to nurses on diabetes prevention and maintenance. Implement Youth Mental Health First Aid training. Educate community on breastfeeding and safe sleep practices.

**Maternal and Child Health:** Offer school and community based educational programming. Provide educational opportunities to reduce the number of overweight youth. Increase awareness of safe sleep practices. Develop and implement a child abuse prevention strategy. Provide smoking cessation referrals. Train community members on CPR. Create an obesity toolkit for pediatricians. Increase access to pediatric care for children who do not have insurance.

**Mental Health:** Implement Youth Mental Health First Aid training. Provide mindfulness training and coaching. Develop an integrated care clinic to provide additional access to mental health services. Support National Alliance on Mental Illness in implementing youth education. Partner with United Way and other community organizations to reduce stigma associated with mental illness.

**Unintentional Injury:** Safe Kids Northeast Florida will focus on water safety, home safety, child passenger safety, bicycle safety, pedestrian safety, infant mortality, safe sleep, heat illness, exertional heat stroke, sports-related concussions and head injury education. Work with the Jacksonville Sports Medicine Program for youth sports injury advocacy and prevention. Utilize media to promote awareness of injury prevention.

**Unprotected Sex/Teen Pregnancy:** Partner with local schools to enhance STI education. Work with Nassau Alcohol Crime and Drug Abatement Coalition to educate teens on importance of HPV vaccine.

**Questions for the Board:**

- 1) As a Board member, what role can you play to support the implementation of our plans?
- 2) The next assessment will begin in 2018. What issues should we review as potential priorities for the next three-year plan?

Access to Care	Health Disparities	Maternal and Child Health	Mental Health	Unintentional Injury	Unprotected Sex/ Teen Pregnancy
